BE IT ENACTED:

Section 1. Findings

The Navajo Nation finds the following with respect to this resolution.

- A. According to Navajo Area Indian Health Service, there are 25,000 Navajos with diabetes and another 75,000 are pre-diabetic. The *Sweet Success* data reports the following in 2011: 31% of Navajo pregnancies were complicated (BMI's) in the overweight or obese range. Division of Diabetes Treatment and Prevention, Indian Health Service Headquarters (2012). Unpublished, Centers for Disease Control and Prevention and the Indian Health Service. Division of Diabetes Treatment and Prevention (2012), Annual diabetes clinical outcomes audit and Navajo sweet success annual audit (a tracking tool) (2012). Unpublished, Navajo Area Indian Health Service, St. Michaels, Arizona.
- B. At an average, it costs over \$13,000 per person annually to treat diabetes. The cost for treating diabetes related complications can exceed \$100,000 per person. O'Connell JM, Wilson C, Manson SM, & Acton KJ (2012). The costs of treating American Indian adults with diabetes within the Indian Health Service, research and practice. *American Indian Journal of Public Health*.

- C. According to the *Navajo Area* [Indian Health Service, IHS] *GPRA Report 2009*, of the obesity rate within the seven (7) Navajo Area IHS service units ranged from 23% to 60%, the overweight rate ranged from 17% to 39% for all age groups, and overall, "the highest percentage of patients identified as obese are those ages 25 to 54, the highest service unit is Tuba City with 60 % of those with calculated BMIs." Navajo Area Indian Health Service (2009). Navajo area GPRA report 2009: government performance results act, (GPRA) program assessment rating tool (PART) report (07/1/08-06/30/09). Unpublished, St. Michaels, Arizona.
- D. According to the *Center of Disease Control and Prevention*, "each year, more than 13,000 young people are diagnosed with type 1 diabetes" and "health care providers are finding more and more children with type 2 diabetes, a disease usually diagnosed in adults aged 40 years or older." For only American Indians, there is a "statistically significant increase in the prevalence of type 2 diabetes among children and adolescents." Center of Disease Control and Prevention (2013). Children and diabetes. <http://www.cdc.gov/diabetes/projects/cda2.htm>
- E. According to the *Mayo Clinic*, primary risk factors of Type 2 Diabetes in children are overweight, obesity, inactivity, race, and family history. Symptoms can include increased thirst, increased urination, increased hunger, weight loss, fatigue, blurred vision, slow-healing sores or frequent infections, areas of and darkened skin. Complications can include heart and blood vessel disease, increased risk cardiovascular problems, including heart disease, stroke, high cholesterol and high blood pressure, nerve damage (neuropathy), kidney damage (nephropathy), eye damage, foot damage, and skin conditions. Mayo Clinic (2014). Type 2 diabetes in children. <http://www.mayoclinic.org/diseases-conditions/type-2-diabetes-in-children/basics/definition/con-20030124>
- F. According to the *American Journal of Clinical Nutrition*, "consumption of sugar-sweetened beverages (SSBs), particularly carbonated soft drinks, may be a key contributor to the epidemic of overweight and obesity, by

virtue of these beverages' high added sugar content, low satiety, and incomplete compensation for total energy." There is a "positive association between greater intakes of SSBs and weight gain and obesity in both children and adults" and the "weight of epidemiologic and experimental evidence indicates that a greater consumption of SSBs is associated with weight gain and obesity." There is "sufficient evidence [that] exists for public health strategies to discourage consumption of sugary drinks as part of a healthy lifestyle." Malik, Vasanti S., Schulze, Matthias B., and Hu, Frank B. (2006). Intake of sugar-sweetened beverages and weight gain: a systematic review. *American Journal of Clinical Nutrition*. According to the *New York Times Magazine* cover story "The Extraordinary Science of Addictive Junk Food" states that people are "addicted to junk food" and "this addiction will only deepen as the food industry continues to find new ways to get people hooked on foods that are convenient and inexpensive." Kalaidis, Jen. (2013). Should the U.S. adopt a fat tax? *The Week*.
- I. According to the *British Medical Journal*, economists agree that "government intervention, including taxation, is justified when the market fails to provide the optimum amount of a good for society's well-being." Kalaidis, Jen. (2013). Should the U.S. adopt a fat tax? *The Week*.
